

VISION

Nuova Framar is committed to being the flexible partner for European companies that require the production of elements with variable complexity in metal alloys.

MISSION

Nuova Framar's path is characterized by attention to market and customer needs and continuous improvement focused on the following points:

- 1 updated quality management system in line with more rigorous certifications (i.e.: IATF 16949) and risk-based thinking philosophy.
- 2 use of efficient computerized solutions for the fruition of data relating to business processes, guaranteeing the responsible figures a detailed view of performance and compliance with established objectives.
- 3 training and use of specialized human resources in strategic departments (quality area, technical area, logistics, marketing and sales).
- 4 training and use of specialized human resources in operational functions (mechanical maintenance, management of robotic islands).
- 5 dialogue with university spin-offs finalized to the testing and use of solutions for thermo-fluid-dynamic modeling.
- 6 Installation of solutions with best available technology in production, metrology and analysis departments.
- 7 expansion of the market both in the technical sector (automotive, precision engineering, and technology) and in the world of design.
- 8 Improvement of production capacity.
- 9 development of the MKTG/commercial function, market analysis, active advertising of its activities and presence in international exhibition contexts.
- 10 increased frequency of internal monitoring activities and use of statistical studies for data processing.
